Paper 5 Practical Test MARK SCHEME Maximum Mark: 40

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2016 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

® IGCSE is the registered trademark of Cambridge International Examinations.

This syllabus is approved for use in England, Wales and Northern Ireland as a Cambridge International Level 1/Level 2 Certificate.

This document consists of 8 printed pages.

Abbreviations used in the Mark Scheme:

- ; separates marking points
- / alternatives
- I ignore
- R reject
- A accept (for answers correctly cued by the question, or guidance for examiners)
- AW alternative wording (where responses vary more than usual)
- AVP any valid point
- ecf credit a correct statement / calculation that follows a previous wrong response
- ora or reverse argument
- () the word / phrase in brackets is not required, but sets the context
- <u>underline</u> actual word given must be used by candidate (grammatical variants excepted)
- max indicates the maximum number of marks that can be given

| Question | Mark scheme | Mark | Guidance |
|-----------|---|---------|--|
| 1 (a) (i) | length 30 (mm), width 10 (mm), height 10 (mm) ; | [1] | Check Supervisor's report and candidates for variation A cm if clearly shown |
| (ii) | 1. table drawn to show rows/at least 3 columns ; | | Check supervisor's report |
| | 2. table drawn with room for at least 4 bubble readings ; | | |
| | 3 appropriate column headings with units: (number of) bubbles per (or in) 3 minutes/min or (number of) bubbles/minute or min + | | |
| | potato/piece of potato/stick/piece/AW slice/stick and 1 or 2/mean/average (number of bubbles per 3 min or per 1 min); | | |
| | four numbers for bubbles recorded ; even if all are 0 bubbles; but not tally chart alone without number of bubbles. | | |
| | 5. mean calculated for each potato piece A and B ; allow ½ of a bubble 14.5. | | |
| | 6. mean for A and B are different (expect A < B) ; | [6] | |
| (b) | prevents leakage of oxygen/all oxygen collected ; | | A gas/air/bubbles I loose bung could come out/no gas from outside enters the tube |
| | increases accuracy / results will be comparable / consistent / reliable / valid / AW; | | I fair test comments |
| | allow a pressure to build up/bubbles to form ; | max [2] | |

| Question | ſ | /lark scheme | Mark | Guidance |
|----------|---|--|---------|---|
| (c) (i) | catalase produces more bubbles when it is active/ora; the lower the percentage of alcohol (used for soaking) the more bubbles are produced/AW/ora; the higher the percentage of alcohol used the lower the activity of the catalase/ora ; B has more catalase activity/bubbles, A has less activity/bubbles ; number showing same trend as candidates results ; | | [max 1] | A as number of bubbles increases the activity of the catalase increases need not refer to catalase (more bubbles means more activity) A concentration of alcohol. |
| (ii) | | | [1] | I restatement of results (number of bubbles from each piece of potato) |
| (iii) | | | [1] | |
| (d) (i) | <i>variable</i> hydrogen peroxide volume/ concentration. | controlled byfor each potato piece: measured 10 cm³ or used same strength / volume solution; | | variable must match control given |
| | potato; | same dimensions used for each piece//30 mm × 5 mm × 10 mm or pieces cut from same potato/type of potato/ surface area ; | 1 + 1 | |
| | time ; | for bubble counting – keep the same time e.g. counted for 3 min for each piece/ soaking for same time e.g. 24 hours; | [max 2] | 'Same time' needs qualification. |

| Question | | Mark s | cheme | Mark | Guidance |
|----------|--|------------------------|---|---------|---|
| (ii) | source of error | meth | od of reducing error | | method must match the error. 1 mark for error, 1 mark for method. |
| | bubbles are all different sizes; | use a | ure the volume gas syringe/collect in asuring cylinder/AVP; | | |
| | bubbles difficult to count ; | meth gas/i use 2 | (tally) counter/ od of collecting the measure the volume/ people/repeat for ility/AW; | 4 . 4 | |
| | setting up and starting time; | use 2 | ? people; | 1 + 1 | |
| | | | | [max 2] | |
| (iii) | | | | | method must match the error. 1 mark for error, 1 mark for |
| | source of error | | reason | | reason. |
| | size of potato/surfac area/type/freshness | | may not be equal so affect rate of activity; | | R reference to bubbles already in (d)(ii) or (b) loose bung. |
| | temperature differen | t; | affects enzyme activity/ AW | | |
| | temperature; | | different temperature affect activity/AW; | | |
| | carry out more repea trials; | ats/ | identify anomalous results/AW; | | |
| | | | | [2] | |

| Question | Mark scheme | Mark | Guidance |
|----------|--|-------------|---|
| (iv) | use exactly the same procedure/do the same/repeat/AW/or description of original method; | | I use boiled potato/boiled catalase/repeat without potato/use water instead of hydrogen peroxide/use liver or yeast/use glass beads |
| | except soak potato in water (and not ethanol)/use 0% alcohol/ without alcohol/use untreated potato/AW; | [2] | giass beaus |
| (v) | same or greater number of bubbles than in B /2% quoted results ; | [1] | |
| (e) | keep away from flames/heat source ; wear goggles/safety glasses: wear gloves; wear lab coat; use tongs/AW; | [max 1] | A use a water bath when heating ethanol |
| (f) (i) | <u>280</u> ; | [1] | |
| (ii) | A axes labelled even scale; | | y-axis: (mean) reaction time /ms x-axis: before drinking alcohol and after drinking alcohol/before and after/or key given x-axis labels approximately under each bar |
| | P both plots accurate ±1/2 small square ; | | |
| | C columns not touching of same width columns at least half the grid on y-axis; | [3] | R superimposed columns |
| (iii) | 220 – 350 (milliseconds) ; | [1] | |
| | | [Total: 27] | |

| Q | uestic | on | Mark scheme | Mark | Guidance |
|---|--------|-------|---|---------|---|
| 2 | (a) | (i) | Outlines – all lines single, clear and unbroken ; | | |
| | | | Size – occupies at least half of the space provided ; | | |
| | | | Detail – oval shape + phloem + 1 other area ; two other areas shown ; | | |
| | | | Label – line to correct area on drawing to show position of xylem (vessel) and line labelled "xylem" | [5] | |
| | | (ii) | measurement of AB = 58 mm ; | | \pm 1 mm A cm/µm I other units |
| | | | line on their drawing and length measured with correct unit ; | | \pm 1 mm ${\rm I\!R}$ if no line drawn or position not indicated/line in incorrect position |
| | | | correct magnification calculation; | [3] | R if units given ecf if measurement(s) above are incorrect |
| | | (iii) | (xylem) walls thick(er)/large (er)/wide(er); (xylem vessels) round(er) ; (xylem) has large(r) cross section area/big(ger) ; | [max 1] | |
