Cambridge IGCSE™

PHYSICS **0625/43**

Paper 4 Extended Theory **May/June 2020**

MARK SCHEME

Maximum Mark: 80

Published

Students did not sit exam papers in the June 2020 series due to the Covid-19 global pandemic.

This mark scheme is published to support teachers and students and should be read together with the question paper. It shows the requirements of the exam. The answer column of the mark scheme shows the proposed basis on which Examiners would award marks for this exam. Where appropriate, this column also provides the most likely acceptable alternative responses expected from students. Examiners usually review the mark scheme after they have seen student responses and update the mark scheme if appropriate. In the June series, Examiners were unable to consider the acceptability of alternative responses, as there were no student responses to consider.

Mark schemes should usually be read together with the Principal Examiner Report for Teachers. However, because students did not sit exam papers, there is no Principal Examiner Report for Teachers for the June 2020 series.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the June 2020 series for most Cambridge IGCSE™ and Cambridge International A & AS Level components, and some Cambridge O Level components.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5: Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).
GENERIC MARKING PRINCIPLE 6: Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Science-Specific Marking Principles

1	Examiners should consider the context and scientific use of any keywords when awarding marks. Although keywords may be present, marks should not be awarded if the keywords are used incorrectly.
2	The examiner should not choose between contradictory statements given in the same question part, and credit should not be awarded for any correct statement that is contradicted within the same question part. Wrong science that is irrelevant to the question should be ignored.
3	Although spellings do not have to be correct, spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. ethane / ethene, glucagon / glycogen, refraction / reflection).
4	The error carried forward (ecf) principle should be applied, where appropriate. If an incorrect answer is subsequently used in a scientifically correct way, the candidate should be awarded these subsequent marking points. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.

5 ‘List rule’ guidance

For questions that require ***n*** responses (e.g. State **two** reasons …):

- The response should be read as continuous prose, even when numbered answer spaces are provided
- Any response marked *ignore* in the mark scheme should not count towards ***n***
- Incorrect responses should not be awarded credit but will still count towards ***n***
- Read the entire response to check for any responses that contradict those that would otherwise be credited. Credit should **not** be awarded for any responses that are contradicted within the rest of the response. Where two responses contradict one another, this should be treated as a single incorrect response
- Non-contradictory responses after the first ***n*** responses may be ignored even if they include incorrect science.

6 Calculation specific guidance

Correct answers to calculations should be given full credit even if there is no working or incorrect working, **unless** the question states ‘show your working’.

For questions in which the number of significant figures required is not stated, credit should be awarded for correct answers when rounded by the examiner to the number of significant figures given in the mark scheme. This may not apply to measured values.

For answers given in standard form, (e.g. $a \times 10^n$) in which the convention of restricting the value of the coefficient (a) to a value between 1 and 10 is not followed, credit may still be awarded if the answer can be converted to the answer given in the mark scheme.

Unless a separate mark is given for a unit, a missing or incorrect unit will normally mean that the final calculation mark is not awarded. Exceptions to this general principle will be noted in the mark scheme.

7 Guidance for chemical equations

Multiples / fractions of coefficients used in chemical equations are acceptable unless stated otherwise in the mark scheme.

State symbols given in an equation should be ignored unless asked for in the question or stated otherwise in the mark scheme.

Question	Answer	Marks
1(a)	rate of change of velocity OR change in speed per unit time / s	**B1**
1(b)(i)	deceleration	**C1**
	constant deceleration	**A1**
1(b)(ii)	acceleration	**C1**
	increasing acceleration	**A1**
1(b)(iii)	decreasing speed / velocity OR deceleration	**B1**
1(b)(iv)	constant speed	**B1**

Question	Answer	Marks
2(a)	$V (= 0.3 \times 0.3 \times 0.4) = 0.036\ (m^3)$	**C1**
	$\rho = m / V$ in any form OR $(m =)\ \rho V$ OR 1020×0.036	**C1**
	$(m =)\ 37$ kg	**A1**
2(b)(i)	$P = \rho gh$ in any form	**C1**
	$(h =)\ 400 \times 10^3 / (1020 \times 10)$	**C1**
	$(h =)\ 39$ m	**A1**
2(b)(ii)	$P = F / A$ OR $(F =)\ PA$ OR $500 \times 10^3 \times 0.62$	**C1**
	$(F =)\ 310\,000$ N OR 310 kN	**A1**

Question	Answer	Marks
3(a)	line of action of the centre of mass falls outside the base of the bus OR anticlockwise moment is greater than clockwise moment	**B1**
3(b)	bus more likely to fall over / topple / less stable	**M1**
	(line of action of) centre of mass may fall outside (the base of) the bus	**A1**
3(c)(i)	total mass of passengers = 73×65 (kg) OR 4700 kg	**C1**
	(total mass of bus, driver and 73 passengers) = 21 000 kg	**A1**
3(c)(ii)	(F =) ma in any form	**C1**
	(F =) 15 000 N	**A1**

Question	Answer	Marks
4(a)	molecules escape from the surface of the liquid	**B1**
	more energetic / faster moving molecules escape	**B1**
	slower / less energetic molecules are left behind	**B1**
	temperature of liquid decreases because average K.E. of remaining molecules is lower	**B1**
4(b)	any **two** from: air temperature increases more wind cloud stops covering the Sun	**B2**

Question	Answer	Marks
5(a)(i)	E = Pt in any form	**C1**
	(E =) 6000 J	**A1**
5(a)(ii)	E = mcΔT in any form	**C1**
	$c = \frac{6000}{550(33-20)}$	**C1**
	(c =) 0.84 J / (g °C) OR 840 J / (kg °C)	**A1**
5(a)(iii)	EITHER some of energy supplied by the heater heats the heater / goes to lagging / goes to surroundings	**M1**
	specific heat capacity is lower than value in (ii)	**A1**
	OR some energy may be absorbed from surroundings if they are at a higher temperature	**M1**
	specific heat capacity is higher than value in (ii)	**A1**
5(b)	(specific) heat capacity of water is much higher than (specific) heat capacity of sand	**B1**
	same rate of energy supplied to sand and sea	**B1**
5(c)	cold junction labelled or shown in ice or something similar OR diagram with two junctions with voltmeter labelled	**B1**
	two different metals labelled	**B1**
	galvanometer or voltmeter joining ends of wires	**B1**

Question	Answer	Marks
6(a)	three wavefronts parallel to each other	**B1**
	two wavelengths same as reflected by eye	**B1**
	three wavefronts at same angle to barrier as original	**B1**
6(b)	second, third, fifth and sixth boxes ticked	**B3**
6(c)	1500 m / s	**B1**

Question	Answer	Marks
7(a)	sin *i* / sin *r* = n in any form	**C1**
	r = 18°	**A1**
7(b)	light travelling from optically dense medium to optically less dense medium	**B1**
	all light reflected OR no light refracted	**B1**
	angle of incidence is greater than the critical angle	**B1**
7(c)	ray reflected at face AB with *i* = *r* by eye	**B1**
	ray refracted at face BC and bent away from the normal	**B1**

Question	Answer	Marks
8(a)(i)	region in which an electric charge experiences a force	**B1**
8(a)(ii)	direction of force on a positive charge	**B1**

Question	Answer	Marks
8(b)	any **four** from: • ball moves towards positive plate • ball touches positive plate • made of conducting material so becomes positively charged • repelled from positive plate • touches negative plate and loses charge • negatively charged ball attracted back to positive plate and process repeats	**B4**
8(c)	I = Q / t in any form	**C1**
	t = Q / I	**C1**
	(t = 15 / 0.29 =) 52 s	**A1**

Question	Answer	Marks
9(a)(i)	anti-clockwise (seen from brushes)	**M1**
	I correctly described	**A1**
	F down on left / up on right	**A1**
9(a)(ii)	arrow labelled correct direction on coil	**B1**
9(a)(iii)	electrons –ve OR repelled from –ve connection of supply	**B1**
9(b)(i)	rotates in opposite direction	**B1**
9(b)(ii)	turns faster OR greater moment / turning effect	**B1**
9(b)(iii)	turns faster OR greater moment / turning effect	**B1**

Question	Answer	Marks
10(a)	$^{0}_{}X$	**B1**
	^{-1}X	**B1**
	β OR beta (particle)	**B1**
10(b)(i)	background radiation	**B1**
	rocks / ground / buildings / food / space / weapons testing / nuclear accidents or waste / sun / air / radon / argon	**B1**
10(b)(ii)	subtracts 10 from 80	**B1**
	evidence of recognising two half-lives OR compares 70 and 10	**B1**
	(final reading =) 70/4 + 10 = 27 OR (70/10 = 7) age > 2 half-lives OR age nearly 3 half-lives	**B1**
	age > 11 400	**B1**
