Paper 5 Practical Test

October/November 2021

1 hour 15 minutes

You must answer on the question paper.

You will need: The materials and apparatus listed in the confidential instructions

## **INSTRUCTIONS**

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

## **INFORMATION**

- The total mark for this paper is 40.
- The number of marks for each question or part question is shown in brackets [ ].

For Examiner's Use

Total					

This document has 12 pages. Any blank pages are indicated.

1 You are going to investigate the effect of temperature on the rate of respiration in yeast cells. When yeast cells respire they produce carbon dioxide gas.

Read all the instructions but DO NOT CARRY THEM OUT until you have drawn a table for your results in the space provided in 1(a)(i).

You should use the safety equipment provided while you are carrying out the practical work.

- Step 1 Label the empty 250 cm<sup>3</sup> beaker **hot water-bath**.
- Step 2 Raise your hand when you are ready for hot water to be put into your **hot water-bath**.
- Step 3 Measure the temperatures of the water in the **hot water-bath** and in the beaker labelled **cold water-bath**. Record these values in Table 1.1 in **1(c)(i)**.
- Step 4 Lay the balloons flat on the table. Use the marker pen to mark the widest point of each balloon, as shown in Fig. 1.1.

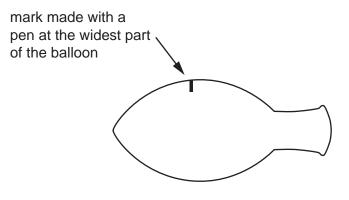

Fig. 1.1

- Step 5 Stir the yeast suspension with the glass rod. Use the measuring cylinder to put 25 cm<sup>3</sup> of the yeast suspension into each of the test-tubes.
- Step 6 Carefully stretch the open end of one balloon over the top of one test-tube, as shown in Fig. 1.2. Repeat this with the remaining balloon and the other test-tube.

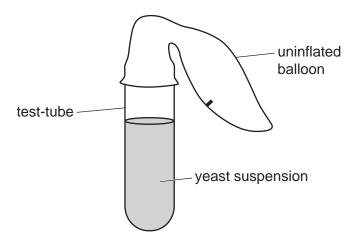

Fig. 1.2

Step 7 Place one test-tube in the **hot water-bath** and the other test-tube in the **cold** water-bath.

Step 8 Measure the circumferences of the balloons at 0 minutes. Do this by placing the string around the widest part of the balloon on the test-tube in the **hot water-bath**, at the mark you made in step 4. This is shown in Fig. 1.3.

Use the ruler to measure the length of the string that is required to wrap around the balloon once. This is the circumference of the balloon.

Repeat this with the balloon on the test-tube in the **cold water-bath**.

Record these measurements in your table in 1(a)(i).

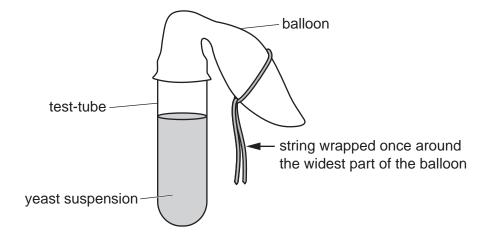

Fig. 1.3

- Step 9 Start the stop-clock and leave the test-tubes in the water-baths.
- Step 10 After 5 minutes, 10 minutes and 15 minutes repeat step 8. This will give you a total of four measurements for the circumference of each balloon.
- Step 11 Measure the final temperatures of the water in the **hot water-bath** and in the **cold water-bath**. Record these values in Table 1.1 in **1(c)(i)**.

Do **not** remove the balloons from the test-tubes.

[4]

(a)	/i\	Prepare a table to record your results from step 8 and step 10
(a)	(1)	Frepare a table to record your results from step 6 and step 10

(ii)	State a conclusion for these results.	
		[1]
(iii)	Suggest why it was important to stir the yeast suspension in step 5.	
		[1]
(iv)	State <b>two</b> variables, other than stirring, that were kept constant in this investigation.	
	1	
	2	

(b)	(i)	Balloons and cells.	string were used to colle	ct and measure the gas p	produced by the yeast
		Suggest anoth	ner, more accurate, metho	d of collecting and measu	ring the gas.
					[1]
	(ii)		e of an indicator which count of an indicator which count of and give the res	uld be used to show that th ult of a positive test.	e gas produced by the
		indicator			
		positive test re	esult		[2]
(c)	(i)	Record your te	emperature measurement	s from step 3 and step 11	in Table 1.1.
		Complete Tab step 3 to step	-	change in temperature in	each water-bath from
			Table 1	.1	
		water-bath	Table 1 temperature in step 3 /°C	.1 temperature in step 11 /°C	change in temperature/°C
		water-bath hot	temperature in step 3	temperature in step 11	
			temperature in step 3	temperature in step 11	
	(ii)	hot cold	temperature in step 3 /°C	temperature in step 11	temperature/°C
	(ii)	hot cold	temperature in step 3 /°C	temperature in step 11 /°C	temperature/°C
	(ii)	hot cold  Describe how the water-bath	temperature in step 3 /°C  the method could be modes.	temperature in step 11 /°C	temperature/°C  [2]  in the temperature of
	(ii)	hot cold  Describe how the water-bath	temperature in step 3 /°C  the method could be modes.	temperature in step 11 /°C  dified to prevent a change	temperature/°C  [2]  in the temperature of

																										ſ	3	3	

**(b)** Scientists investigated the effect of wind speed on the average distance travelled by single pollen grains and groups of five pollen grains joined to form a clump. The pollen grains were dropped from a height of 2 m.

The results of the investigation are shown in Table 2.1.

Table 2.1

wind speed /mpers	average distance travelled by single pollen grains/m	average distance travelled by clumps of five pollen grains/m
0.0	0	0
0.2	38	21
0.4	81	39
0.6	118	55
0.8	154	70

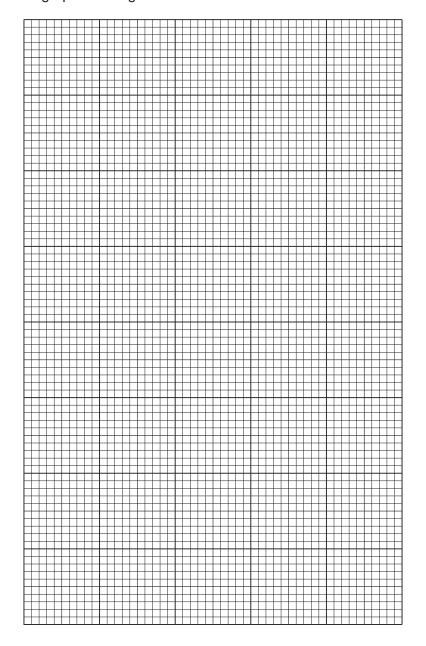

(i) Calculate the percentage decrease in the average distance travelled when the pollen grains fell as a clump compared to a single pollen grain, at a wind speed of 0.6 mpers.

Give your answer to two significant figures.

Space for working.

.....%

(ii) Plot a line graph on the grid of the data in Table 2.1. Include both sets of data and a key.

[5]

(iii) Use your graph to estimate the average distance travelled by **single** pollen grains at a wind speed of 0.5 m pers.

Show on your graph how you obtained your estimate.

...... m

[2]

(iv) Successful pollination results in fertilisation and the production of seeds.

State the test that would show th positive test.	at the seeds	contain protein.	Include the	result of a
test	•••••			
positive test result				
				[2]

		11
(c)	(i)	Plan an investigation to determine the effect of temperature on the rate of transpiration from leaves.
		You may wish to include the apparatus listed and any other apparatus that you think is suitable in your plan:
		<ul> <li>leafy plants</li> <li>electronic balance</li> <li>thermometer</li> <li>string</li> <li>stop-clock</li> </ul>
	410	[6]
	(ii)	Humidity also affects the rate of transpiration from leaves.
		Suggest how you could change the humidity that the leaves are exposed to in a transpiration investigation.
