General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme.
  Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

- **Types of mark**
  - M marks: method marks
  - A marks: accuracy marks
  - B marks: unconditional accuracy marks (independent of M marks)
- **Abbreviations**
  - cao – correct answer only
  - ft – follow through
  - isw – ignore subsequent working
  - SC - special case
  - oe – or equivalent (and appropriate)
  - dep – dependent
  - indep – independent
  - awrt – answer which rounds to
  - eeoo – each error or omission
- **No working**
  If no working is shown then correct answers normally score full marks
  If no working is shown then incorrect (even though nearly correct) answers score no marks.

- **With working**

  If the final answer is wrong always check the working in the body of the script (and on any diagrams), and award any marks appropriate from the mark scheme.

  If it is clear from the working that the "correct" answer has been obtained from incorrect working, award 0 marks.

  If a candidate misreads a number from the question. Eg. Uses 252 instead of 255; method marks may be awarded provided the question has not been simplified. Examiners should send any instance of a suspected misread to review.

  If there is a choice of methods shown, then award the lowest mark, unless the subsequent working makes clear the method that has been used.

  If there is no answer achieved then check the working for any marks appropriate from the mark scheme.

- **Ignoring subsequent work**

  It is appropriate to ignore subsequent work when the additional work does not change the answer in a way that is inappropriate for the question: eg. Incorrect cancelling of a fraction that would otherwise be correct.

  It is not appropriate to ignore subsequent work when the additional work essentially makes the answer incorrect eg algebra.

  Transcription errors occur when candidates present a correct answer in working, and write it incorrectly on the answer line; mark the correct answer.

- **Parts of questions**

  Unless allowed by the mark scheme, the marks allocated to one part of the question CANNOT be awarded to another.

(b)		$x = 2.5$ $y = 3.4$	1	B1ft	Allow $2.4 \leqslant x \leqslant 2.6$ and $3.3 \leqslant y \leqslant 3.5$ or ft their graph where their two lines cross. If lines don't cross or none drawn B0
(c)		$x < 2.5$ or $x < \frac{42}{17}$	1	B1ft	ft their "2.5" value .Allow $x < \frac{42}{17}$ (awrt 2.5) allow $-3 \leqslant x < \frac{42}{17}$ or $(-\infty, "2.5")$ or $[-\infty, "2.5")$ or $[-3, "2.5")$ $]-\infty, "2.5")$ $]-\infty, "2.5"[$
(d)	x | – 2 | – 1 | 0 | 1 | 2 | 3 | 4 y | **7** | **2** | −1 | **– 2** | **–1** | 2 | 7	7, 2, −2, −1	2	B2	B2 for 4 correct. B1 for 3 correct.
(e)	At least 5 points plotted correctly		2	M1	Ft their points.
		Correct curve		A1	Fully correct curve drawn. Allow ± 1 small square
(f)	$x^2 - 2x - 1 < \frac{6+3x}{4}$ oe		3	M1	Rearranging to use the graph. eg $x^2 - 2x - 1 - \frac{6+3x}{4}$ This must be seen
		–0.7 or 3.5		A1ft	M1 must be awarded. If parts(a) (i) and (e) are correct we will allow -0.7 ± 0.1 or 3.5 ± 0.1 Otherwise the numbers must match their graphs Allow ± 1 small square Must give values to 1dp
		$"-0.7" < x < "3.5"$		B1ft	Allow awrt −0.7 and awrt 3.5 or ft their 2 values accept other notation eg $(-0.7, 3.5)$ or $]-0.7, 3.5[$ This mark does **not** imply M1A1
